APPENDIX

DRAFT IMPUTATION RULE

1. Applicability of Section 32.27 to integrated local/long distance operations

(a) Whenever a dominant provider of local exchange service that also provides long distance services has elected to offer long distance services through a separate affiliate, those transactions shall be subject to Section 32.27 of the Commission's rules.

(b) Whenever a dominant provider of local exchange service that also provides long distance services has elected to operate on an integrated basis, rather than providing its long distance services through a separate affiliate, then, for purposes of imputing costs to that provider's long distance services, the requirements of section 32.27 of the Commission's rules shall apply as though the long distance services were being provided through an affiliate.

(c) In no event shall the retail price of any long distance service being furnished by a dominant provider of local exchange service that also provides long distance services be set less than the sum of items 2(b)(1) through 2(b)(5) and 2(c) below, plus any incremental network or other costs required for the provision of long distance service.

2. Imputation cost standard applicable to each category of cost

(a) For purposes of imputation, a distinction is made among three types of costs – "direct costs," "joint costs," and "common overhead costs."

(1) "Direct costs" are incurred for the production of a specific product or service and are avoided in their entirety if such service is not provided. "Direct costs" may include both fixed components as well as variable components that increase (although not necessarily in direct proportion to) the quantity of the product or service that is being produced.

(2) "Joint costs" are incurred for the production of two or more products or services and not avoided as long as at least one such product or service continues to be produced.

(3) "Common overhead costs" relate to functions of a general business nature not specifically associated with any product or group of products. "Common overhead costs"

may include both fixed components as well as variable components that increase (although not necessarily in direct proportion to) the overall scale of the enterprise.

Direct costs and Joint costs shall be imputed into the price of long distance services furnished by a dominant provider of local exchange service in accordance with 2(b) following; Common Overhead costs shall be imputed into the price of long distance services furnished by a dominant provider of local exchange service in accordance with 2(c) following.

(b) For purposes of imputation for any long distance service furnished by a dominant provider of local exchange service that also provides long distance services, the following shall apply:

(1) *Access services.* For purposes of imputation, the tariff prices of all switched and special access services that would ordinarily be utilized by a section 272(a) affiliate or by a non-affiliated provider of interexchange services shall be utilized, whether or not such services are actually being utilized by the integrated provider in the specific network architecture applicable to an integrated dominant provider of local exchange service that also provides long distance services.

(2) *Non-access tariff services.* For purposes of imputation, the tariff prices applicable to all non-access local exchange services that would ordinarily be utilized by a section 272(a) affiliate or by a nonaffiliated provider of interexchange services shall be utilized, whether or not such services are actually being utilized by the integrated provider in the specific network architecture applicable to an integrated dominant provider of local exchange service that also provides long distance services.

(3) *Non-tariff services or functionality satisfying the Prevailing Company Pricing threshold set out at 47 CFR 32.27(d).* For purposes of imputation, the prevailing company prices applicable to all non-tariff services of a type or providing a functionality that would be offered to and, in some cases, utilized by a section 272(a) affiliate or by a nonaffiliated provider of interexchange services, where the level of utilization by nonaffiliated entities is sufficient to satisfy the Prevailing Company Pricing threshold set out at 47 CFR 32.27(d), the Prevailing Company Price as it would be set in accordance with 47 CFR 32.27(d) shall be utilized, whether or not the precise manner in which the integrated provider furnishes such functionality to itself is the same as that which is being offered to nonaffiliated entities.

(4) *Non-tariff services, functionality, information or the beneficial transfer of assets not satisfying the Prevailing Company Pricing threshold set out at 47 CFR 32.27(d).* Where non-tariff services, information or the beneficial transfer of assets of a type or providing a functionality that would be provided to a section 272(a) affiliate but whose usage by one or

more nonaffiliated providers of interexchange services is not sufficient to satisfy the Prevailing Company Pricing threshold set out at 47 CFR 32.27(d), for purposes of imputation the fair market value or the fully-distributed cost, whichever is greater, shall be used. The fair market value of such services shall be determined by a survey of prices of comparable services being offered on a stand-alone basis by firms ordinarily in the business of providing such services,

(5) *Non-tariff functionality or the beneficial transfer of information or assets not offered or available to nonaffiliated entities.* Where the production of long distance services on an integrated basis by a dominant local exchange service provider involves the use of non-tariff services, functionality, information, or the beneficial transfer of assets of a type or providing a functionality that would be provided to a section 272(a) affiliate but which is not required to be offered to nonaffiliated providers of interexchange services, imputation shall be based upon the fair market value or the fully-distributed cost, whichever is greater, of such service, functionality, information, or the beneficial transfer of assets, including in particular the fair market value of any customer proprietary network information that is used or referenced during the course of marketing, selling, or furnishing the long distance service. The fair market value of such services or functionality, including any customer proprietary network information, shall be based upon the cost that a provider of interexchange services that is not affiliated with a dominant incumbent local exchange carrier would reasonably incur in order to obtain or to self-provide such services, functionality and/or information.

(c) Common Overhead costs shall be imputed to long distance services furnished by a dominant provider of local exchange service on the basis of fully distributed cost.

3. Service-specific imputation required

(a) A dominant provider of local exchange services that is required to impute costs to its long distance services pursuant to these rules must satisfy such imputation requirements separately with respect to each of its retail long distance services.

(b) Where such long distance service is included within any bundled offering that also includes any dominant local exchange services or service elements, the price of such long distance service to which the imputation requirement is to apply shall be determined by subtracting the retail price(s) of all component(s) of the bundle other than long distance from the total retail price of the bundle.

(c) Any bundle consisting of basic local exchange (dial tone) service, local calling, vertical features, intraLATA and interLATA toll, and any other components or features must be priced, in the aggregate, at a level sufficient to recover the aggregate of all tariff prices of all tariff services (or their functional equivalents) included within the bundle together with all other imputed and directly-assigned costs applicable to the bundled offering.

4. Allocation of costs for upgrades or replacements

(a) All investments in plant, facilities or equipment that will be jointly used by regulated and nonregulated services within five years of the date of acquisition and installation of that plant shall be presumed to be acquired primarily for the benefit of the nonregulated services, absent a showing to the contrary.

(b) At a minimum, any increase in net investment for the replacement assets over the remaining net book cost of the plant being replaced shall be allocated to and imputed into the price floor applicable to the nonregulated service.

5. Cross-subsidization prohibited

(a) In no event shall a dominant provider of local exchange service that also provides long distance services and that has elected to operate on an integrated basis rather than providing its competitive long distance services through a separate affiliate engage in actions that constitute a cross-subsidization of its competitive long distance services from its regulated services.

(b) For purposes of this rule, "cross-subsidization" shall be deemed to occur when in-region long distance services or nonregulated services, or telecommunications services that are treated as nonregulated services under these rules, are priced below cost by use of subsidization from customers of regulated services; or when a provider's in-region long distance services or non-regulated services derive benefits from the regulated operations without the regulated operations receiving just and reasonable compensation from in-region long distance services or nonregulated operations for the benefits derived by such in-region long distance services or nonregulated operations.
